

# Digital support for the professional integration of Deaf people

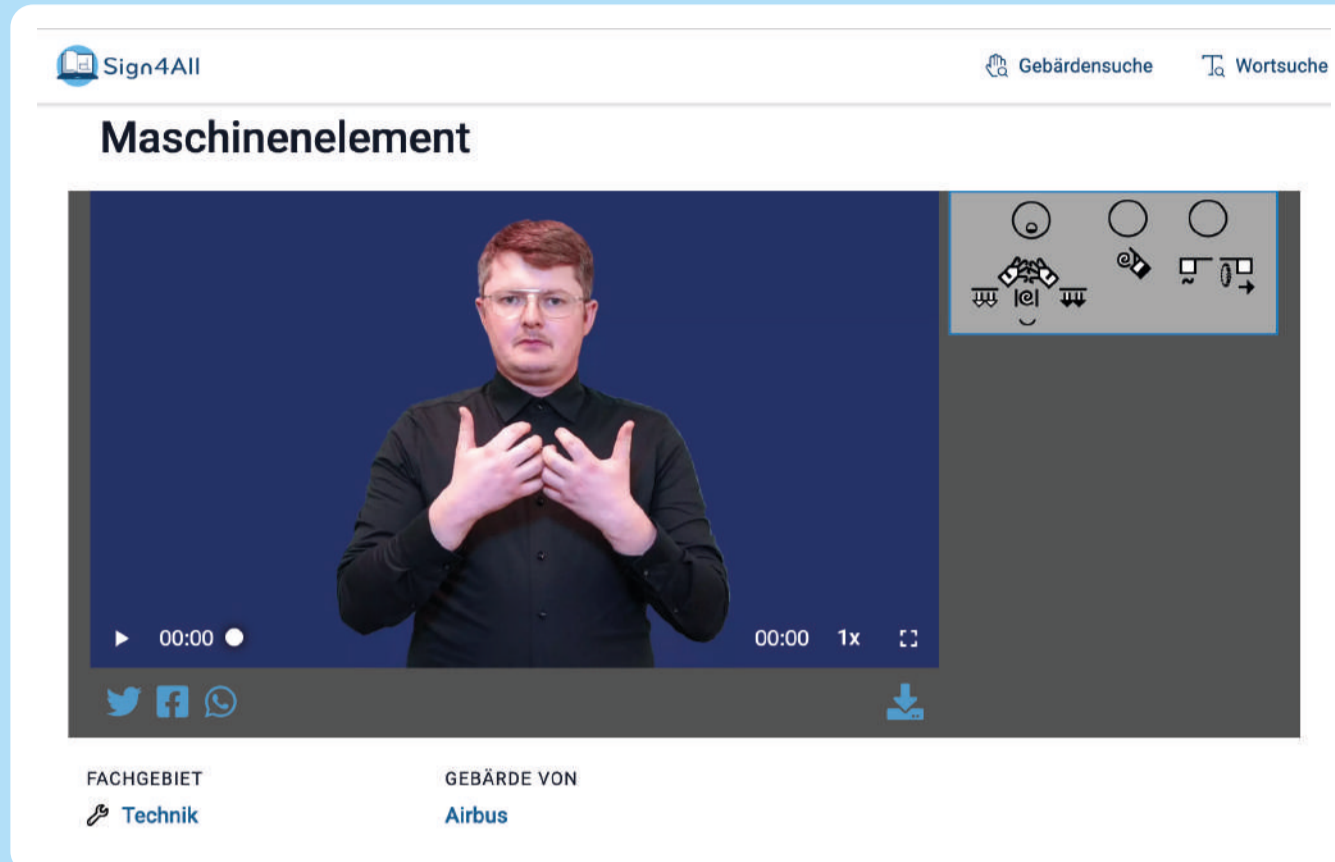

## The project „Digital support for the professional integration of Deaf people“ focuses on the following contents:

### Advantages of SignWriting for the use of teaching contrastive grammars:

- Clear representation of different sentence structures
- Clear differentiation of different sign language sentence elements
- Sensitisation of the sign language awareness

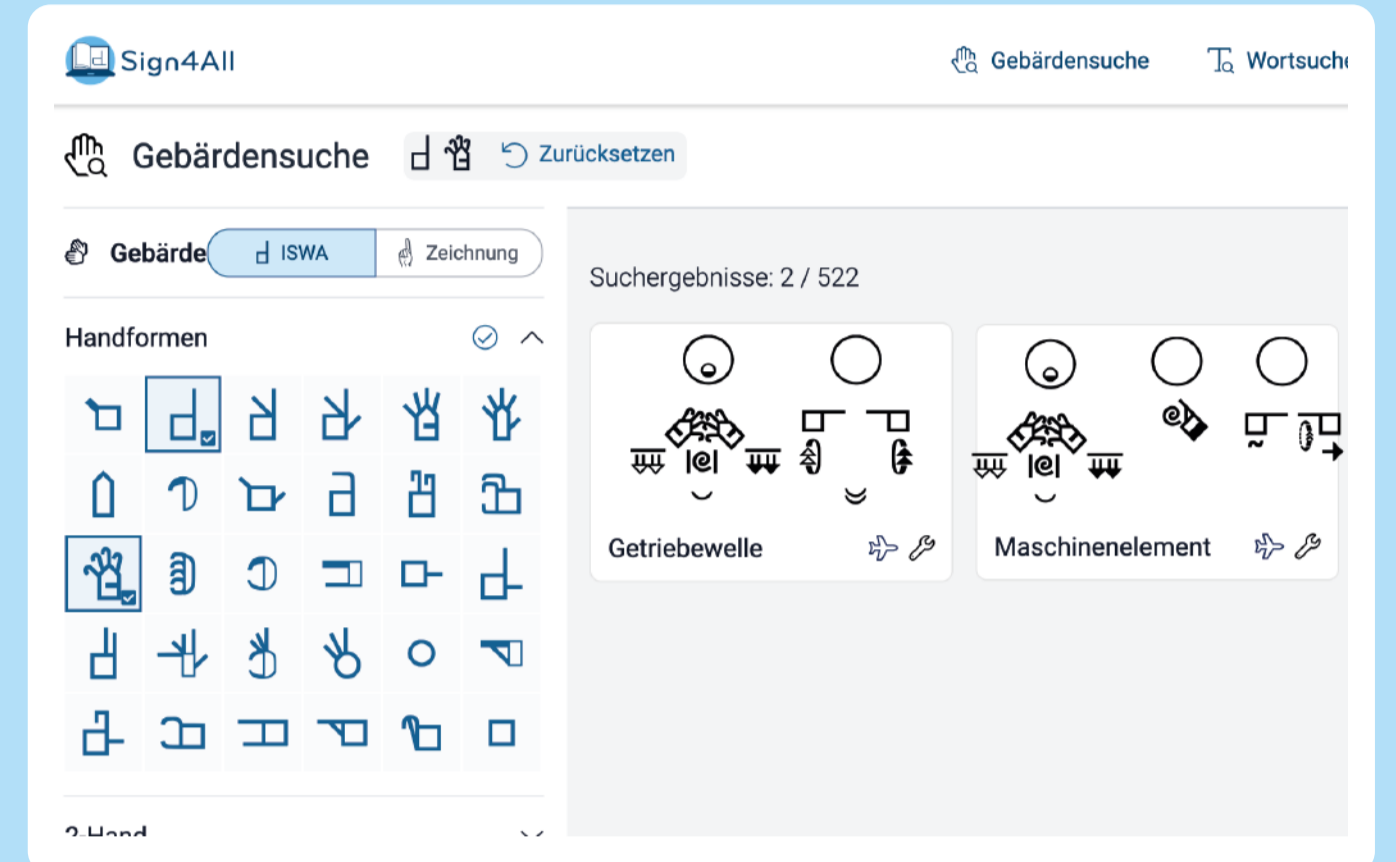

### Representation of subject-specific manual signs

Job-specific representation of subject-specific manual signs in following professional fields:

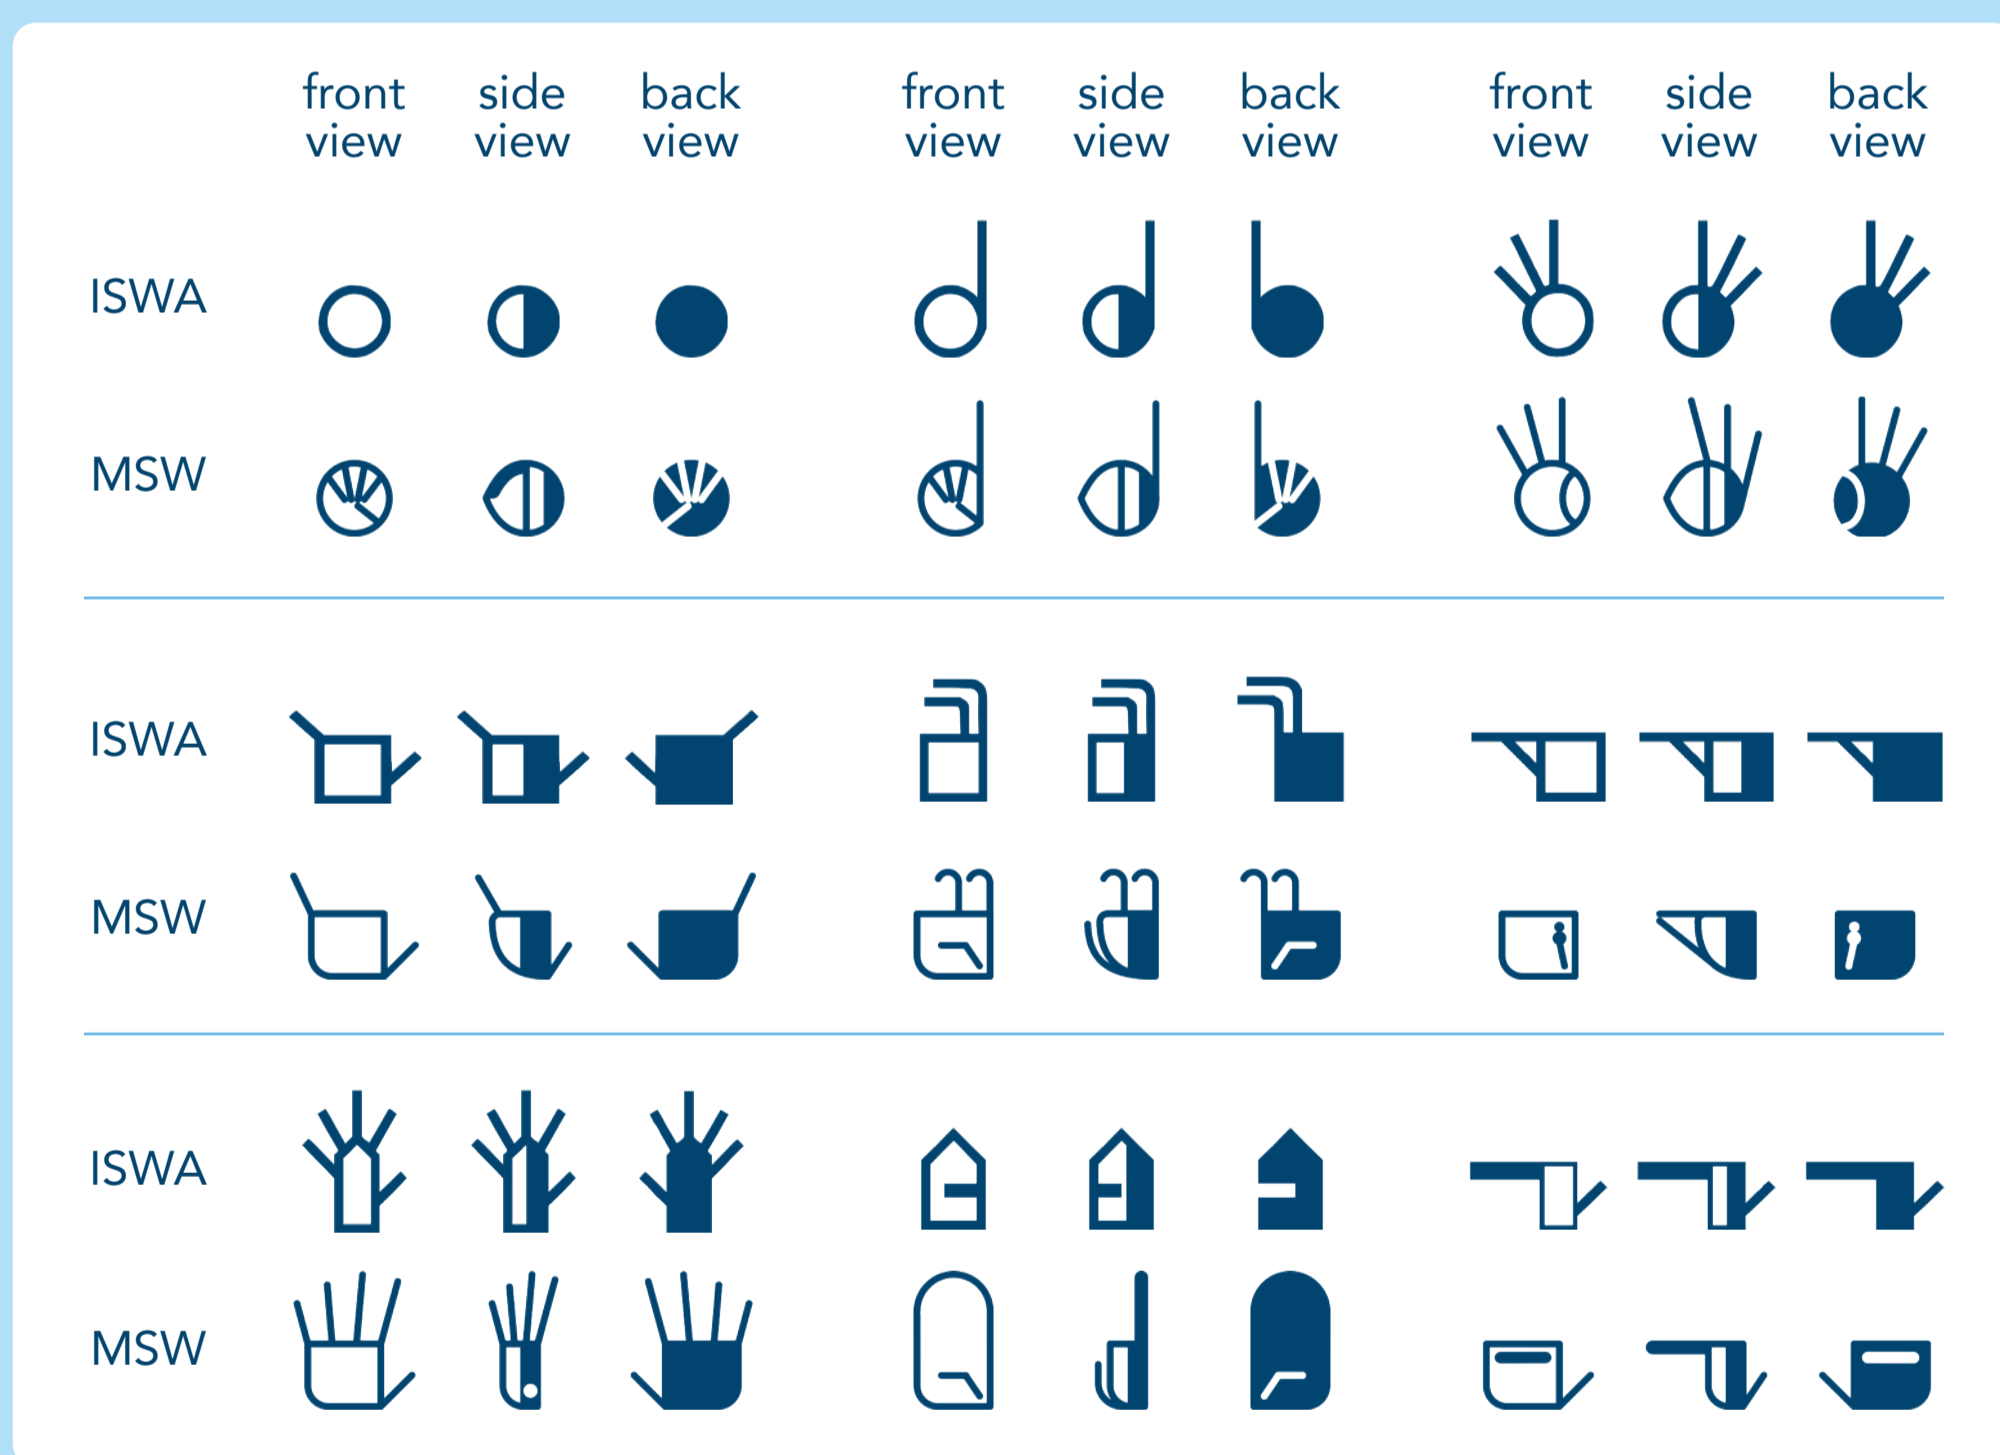

- Aviation Technology
- Media Technology
- Dental Medicine
- Information Technology

### Specialised sign search with the using SignWriting symbols

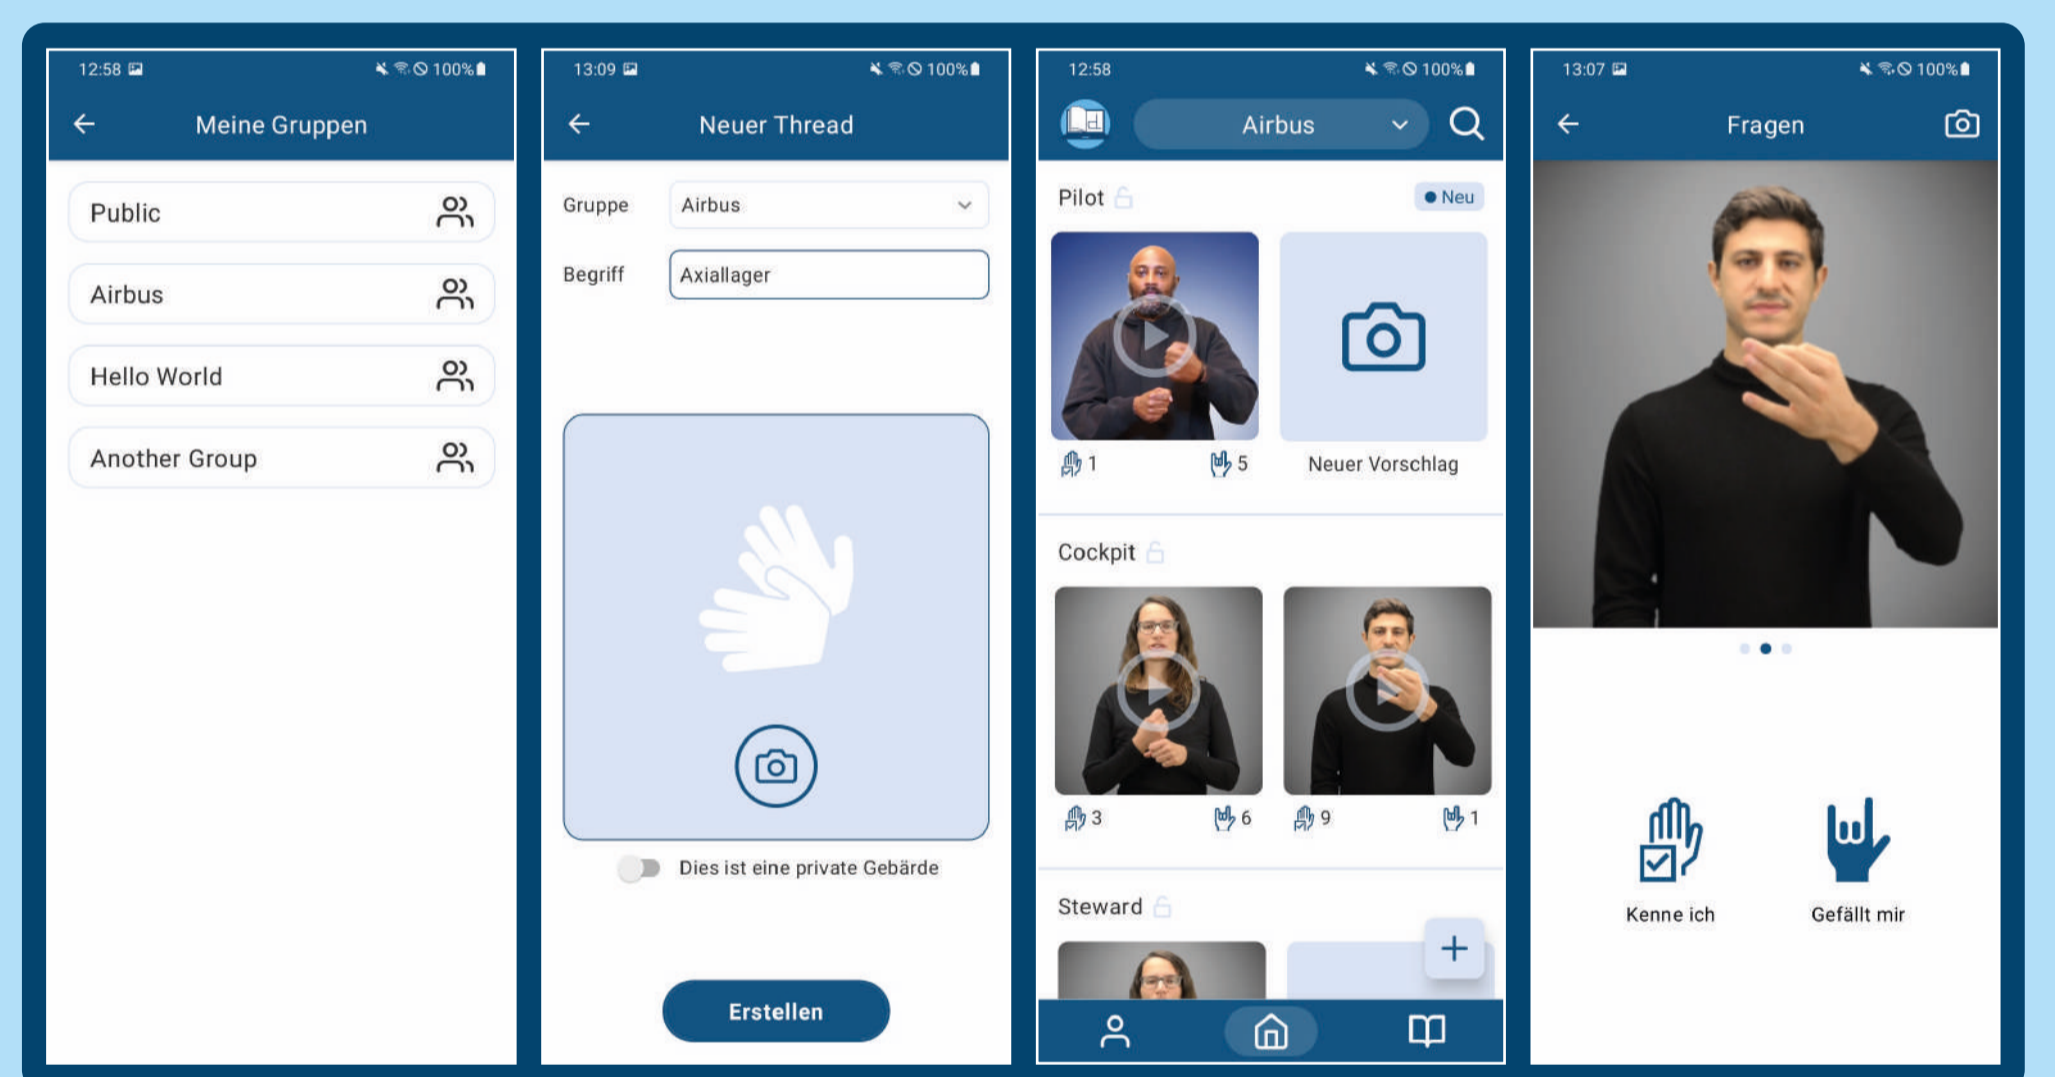

The SignSearch system is developed with using ISWA-symbols for handshapes, two-handedness, movement and contact. Signs can thus be searched with reference to their form.

### Modernisation of SignWriting

The above image shows ISWA and Modernised SignWriting symbols. Modernised SignWriting symbols can be identified, comprehended and therefore accepted more easily. Modernised SignWriting supports the identification of Deaf users with their native language.

### Involving Deaf users in the development of professional sign language use

- Invitation of native signers to closed group discussion
- Creation of new DGS signs in the agreement of language-specific quality standards
- Verification of currentness of manual signs
- Revision of outdated manual signs
- Validation of sign language interpreter quality
